

PRODUCTION MANAGER

Deliver Data To Improve Plant Performance

SafetyChain Production Manager is a plant productivity solution that analyzes real-time operation, human collected, and equipment data to help process manufacturers maximize the performance of their facilities. Capture real-time SPC and OEE data to optimize outputs for every line, shift, and plant from a single solution. Plus, maximize availability and simplify plant maintenance with task scheduling.

Drive Overall Equipment Effectiveness For All Of Your Plants

Monitor, trend, and report OEE data in real-time for every plant, line, and shift across the enterprise on customizable dashboards. Load production schedules, track actual to target performance, and calculate dollars saved from reduced downtime and increased performance.

Key Benefits

Integrated OEE & SPC

Reduce unplanned downtime

Faster root cause analysis

Simplify plant maintenance

Maximize yield

Reduce waste & rework

Facility-wide reporting

Eliminate paper

Mobile & automated data

Use on any device

Increase Yield, Accuracy, And Throughput With Real-Time SPC Monitoring

Maximize your production with Real-time SPC for operators to ensure every shift achieves a consistent, efficient, and quality output. Monitor and automatically calculate specification limits with predictive run-time rules that alert operators on quality trends to take action before your process is out of control.

Realize Continuous Improvement With Enterprise Analytics

Utilize web, mobile, and floor-friendly production dashboards to actively monitor availability, performance, and root cause analysis across all your plants to help make better, faster operational decisions that drive continuous improvement.

PRODUCTION MANAGER Includes

OEE CALCULATIONS & DASHBOARDS

SPC CHARTS

REAL-TIME SPEC VERIFICATION

ROOT CAUSE ANALYSIS & ALERTS

EQUIPMENT MAINTENANCE

Marel & SafetyChain

The Marel and SafetyChain Software partnership brings together the leading platform for FSQA and Innova, the #1 Food Processing Software (MES) to fish, poultry, and meat producers. This innovative approach focuses on increasing yields and maximizing productivity for customers in North America.
