

Innova

Food Processing Software

Quality Control

- Paperless QC
- Automatic data collection
- Real time monitoring
- Accurate traceability
- Bluetooth support
- Easy to learn - easy to use

Paperless QC process

The Innova Quality Control software is built into the production cycle, giving you paperless control of the QC process. It lets you capture and monitor critical quality information on the shop floor in real time. Reliable data gives you an accurate status of quality inspections and issues. Innova QC collects information for custom-made reports and trend analysis, enabling your management team to improve their processes even further.

The Innova Quality Control module allows quality personnel to enter quality related information at designated control points throughout production. All inspections are directly linked to production, raw material source or final products.

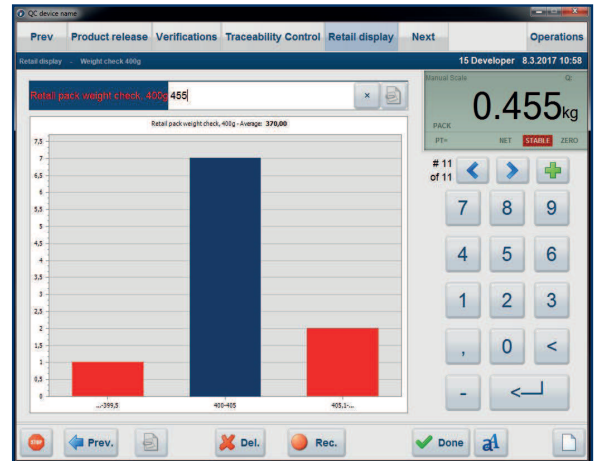

Respond immediately

You can raise efficiency by using dashboards to monitor performance and respond in real time. This helps benchmark suppliers and avoid potential problems by learning from past issues.

Bluetooth support

Innova QC supports different Bluetooth devices, including a temperature probe and scales like the Marel M1100 mobile and battery powered Bluetooth scale. An efficient mobile QC station consists of a PC tablet, a Bluetooth scale and a trolley. It offers paperless, mobile quality control that is both secure and easy to perform.

Key features

- **Online quality control data in real time**
A paperless quality inspection and recording process that enables you to respond rapidly to quality deviations. With Innova, you can elicit different responses based on inspection results.
- **Connections to production**
With quality control data linked to traceability information, a lot, item, pack or pallet can be placed on quality control hold because of a failed inspection. This prevents it from entering production.
- **Dashboards and customized reports**
Innova QC keeps all data as long as you want. You can access it any time for historical trend analysis. Innova dashboards are easy to use and all reports can be customized for different purposes.
- **Adjust your inspection list and scheduling**
You can easily customize the design, planning and monitoring of your quality inspections.

INNOVA

Food Processing Software

Marel is the leading global provider of advanced equipment and systems for the fish, meat and poultry industries.
