

New standard weighing indicator  
The M1200 series

+ JBT Marel

# Quality that's built to last Engineered to the highest manufacturing standards

The M1200 series are JBT Marel's standard industrial indicators used for simple manual weighing applications

The M1200 is a non-automatic weighing indicator to use in combination with a weighing platform as a complete weighing instrument. The weighing instrument can be used either as a land-based scale or as a motion compensated marine scale designed especially for use on-board fishing vessels.

JBT Marel scales:

- precision
- durability
- and a warranty to match

The M1200 standard scales are certifiable and have an industry leading warranty of up to **7 years** for land based scales and **4 years** for marine versions.

The M1200 series can help you monitor your process, lowering your give-away, increasing your yields, and ensuring better production control.

## AVAILABLE OPTIONS:

### M1200 with vertical display

Mounted on the platform with the display facing upwards. This version can only be used with a special platform. Also available with battery option.

### M1200 with wall mount

With wall or table mountings that can be connected to most weighing platforms.
