

StreamLine Whitefish

Innovative and intelligent trimming

- Real-time data to maximize the value of production
- Real-time performance monitoring
- Cost-effective short payback time
- Compact, easy to clean design

Flexible trimming

Marel designed the StreamLine for trimming processes and made it customizable to fit the diverse needs of processors. The StreamLine provides real-time monitoring of the yield, throughput and quality of each operator, allowing production managers to make adjustments to ensure peak operating efficiency.

StreamLine reduces the manual work of moving product and takes care of by-product handling to increase productivity and reduce time spent on non-value-added activities. Improved logistics with a StreamLine enables producers to reduce labor and boost yield for a shorter return on investment.

Modular design

StreamLine is a modular design and is customizable to meet a full range of processing needs. Optional accessories are available, such as the quality control station, which performs pre-scheduled or random quality checks linked to each workstation. StreamLine is built with ergonomics in mind and has a compact and hygienic design.

Software for advanced yield management

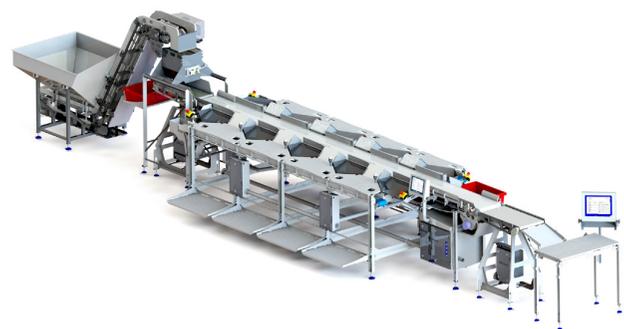

All production is monitored with Innova, Marel's comprehensive software. The Innova module for flow and trimming lines provides managers with a real-time overview of yield, throughput and quality. Innova and StreamLine operate seamlessly to provide the management team an instant overview and feedback on the performance of the whole line or of individual operators.

Incentivize your employees

Innova offers the ability to measure the finished product for key performance indicators (KPIs) and links that information to a relevant worker. Individual monitoring of each operator allows managers to install bonus payment plans for added incentive. Recent tests indicate that Streamline can encourage poor performers to improve and quickly enhance their productivity.

Features

- Ergonomic workstations
- Improved product handling
- Automatic product delivery to operators
- Integrates with Innova intelligent production software
- Easy to clean
