

# Marel T3 Linking Chain

Twice the life of the TECO Chain at a Lower Price

- Very Low Special Pricing
- Proprietary design
- Longer runtime
- Virtually no stretching
- Reduced casing breakage

## A New Standard

Marel is excited to announce an innovative new chain for their line of Townsend Linkers. The Marel T3 Linking Chain has been built to run longer, provide cost savings and be more hygienic.

The extended life of the chain is due to a proprietary design that uses more robust components compared to other chains. The design ensures minimal stretching which reduces giveaway and casing usage. This reduction results in significant cost savings you will notice over the lifetime of your linker.

Additionally, there will be savings because the pinchers and lugs are electropolished. By electropolishing the components less damage will occur to casings. Plus, this method makes for easier sanitation by reducing points that may harbor contaminants throughout the chain.

Early testing indicates these new chains can last twice as long as a TECO Chain, in normal operations.
